The COVID-19 pandemic has led to additional measures in the regular disinfection of public spaces, including public transportation. NJ TRANSIT enlisted the expertise of CAIT: Center for Advanced Infrastructure and Transportation at Rutgers to **address air treatment and disinfection techniques** as part of a broader strategy to manage exposure to COVID-19 and minimize risks for employees and passengers while transit vehicles are in-service. This workshop will share the findings of the study and how these different techniques could be applied in your community transportation services.
